

LOREKA360° Emissions Desk

Emissions
Compliance.
Data Driven.
Expert Led.

Rising regulatory complexity

Maritime emissions compliance is no longer optional. Regulations are tightening across global and regional jurisdictions, including:

- IMO DCS & more → Mandatory reporting & emission improvement via SEEMP Parts II & III
- EU & UK MRV/EU ETS → Strict emissions reporting & carbon pricing
- FuelEU Maritime → Promotes adoption of cleaner and more sustainable fuels
- Approved IMO GHG Fuel Intensity (GFI) → Adds future GHG fuel intensity tracking

Risks of non-compliance:

- Financial penalties
- Port delays & disruption
- Reputation damage

Full-service emissions compliance

LOREKA360° Emissions Desk delivers end-to-end emissions management support.

- Backed by ex-seafarers, maritime engineers, and certified technical auditors
- Combines smart software with real-world maritime expertise

Core services

Data handling & reporting

- Voyage and port stay error checking
- IMO DCS, EU/UK MRV documentation prep
- Submission support to platforms (e.g., Thetis MRV)

CII & SEEMP advisory

- Support for corrective actions under SEEMP Parts II & III
- CII simulation, forecasting & strategy planning

Charter party & verification

- Emissions statements (End to End Compliance/Delivery to Redelivery)
- Reconciliation for charter party obligations
- Prepared reports for verifiers (ClassNK, CCS, DNV, ABS, BV)

Expert human support

- Manual validation of logs, ROBs, and Proof of Sustainability (PoS)
- Crew guidance and data training
- Monitoring Plan compliance/consistency checks
- Emissions advisory for budgeting & planning

Why choose LOREKA360° Emissions Desk?

- Seamless data + advisory integration
- Flexible for fleets of any size
- Preparation for future compliance standards
